Terminology and Definitions

- **Ruleset**: A structuring element to organize and administrate Insights. A Ruleset can contain any number of Insights. The Insights are typically assigned to a Ruleset according to business-based criteria.

- **Insight**: An Insight is a structuring element to organize and administrate Patterns. Patterns are typically assigned to Insights according to business-based search criteria. An Insight can contain one or more patterns. Multiple patterns can be grouped using 'AND' or 'OR' relations.

- **Pattern**: A search query to match specific patterns within the code. A Pattern can be either in plain text or in regular expression format.
